SECTION B

51. Read the passage below and then answer, in **full** sentences, the questions that follow.

Bedbugs are dangerous insects. They are a menace once they enter one's home and find their way into mattresses and sofa sets.

Bedbugs are small wingless nocturnal insects. They feed on human blood and other warm-blooded hosts. Their skin colour ranges from rust brown to a deeper red brown. The adult bedbug has a flattened body without wings. They are oval and grow up to 5mm long.

The biggest sign of bedbugs is when people complain of bites that occurred while they were asleep. If this happens, you should examine the bedrooms for bedbugs. Most bedbugs feed on their hosts while they are asleep. The host painlessly supplies them with blood. While feeding, they inject a small amount of saliva into the host's skin.

There are a few tips on how you can avoid bedbugs. First and foremost, you should avoid buying second-hand furniture and if you really must, you must thoroughly check it for bedbugs. You must also thoroughly check for bedbugs before you move into a house. In lodges or hotels, before unpacking your luggage, you must try to thoroughly check for bedbugs. When you get back home, you should wash clothes with hot water, just to ensure that you kill the bugs you might have picked up.
